KANSAS AGRICULTURAL STATISTICS INFORMATION FOR 1986 AND PRELIMINARY ESTIMATES FOR 1987

INTRODUCTION

This publication, "Farm Facts 1987," provides a continuing series of data of critical importance in measuring the success and progress of Kansas agriculture. The current facts and trends shown in this publication are essential to our farmers as they make their production and marketing decisions. They are also of utmost importance to agribusiness firms as they work with farmers to improve the overall efficiency of agriculture by better planning to meet the needs of production agriculture in delivering input supplies and in providing viable markets. Reliable data such as that shown on the pages herein are essential to the economic efficiency of the agribusiness segment which is of critical importance to the Kansas economy.

I want to convey my personal thanks to the thousands of Kansas farmers and agribusiness firms who have responded to the many surveys conducted by Kansas Agricultural Statistics. Your response to those surveys is the foundation upon which our data system is based and in responding you have made an important contribution to the Kansas economy.

Sam Brownback,
Secretary of Agriculture

1987 AGRICULTURAL HIGHLIGHTS

by Sam Brownback

In general terms 1987 was a very good year for Kansas agriculture. Most often the weather was quite favorable, prices were frequently better than the previous year, and a generally high level of government payments was maintained. This resulted in significantly improved farm income and a further reduction in farms' outstanding debts. It also appears that a turn-around and possibly some increase in land values may have occurred.

There were many pleasant periods of weather during 1987. January, February, and March provided more than normal precipitation with temperatures generally averaging above normal. Severe late March blizzards in western Kansas resulted in heavy losses of livestock for some ranchers and severe frost damage to the more advanced wheat which had shown rapid growth with the unusually warm winter weather. The month of April was a bit on the dry side in all but north central Kansas, but May brought generally ample moisture. In the following couple of months state averages were about normal, but some areas of the state, particularly the east, were drier than normal until August. The warm, dry weather toward the end of July caused more damage to row crops than was realized at the time.

Fall weather was ideal for harvest with temperatures tending to be slightly above average, lots of sunny weather, and little rain to delay harvest as was experienced the previous year. Both September and October precipitation was well below normal throughout the state except for September in the southwest. The western third of the state was exceptionally dry in October with the result that wheat was often seeded in dust and many fields showed little, if any, growth prior to entering winter. Thus, the pleasant harvest weather had a negative impact on fall seeded crops, particularly in the west.

Grain production in Kansas during 1987 was very good. Wheat production totaled 366.3 million bushels, nearly nine percent more than the previous year. Some 9.9 million acres were harvested, the lowest harvested acreage since 1972. Yield per acre, at 37 bushels, was four bushels higher than 1986. Wheat prices for the year were generally below 1986 levels from January through May, but trended higher each month after June, and at $2.25 per bushel, averaged 10 cents more than in 1986. The value of 1987 production totaled $897 million or 18 percent more than the 1986 crop. With wheat historically accounting for nearly 25 percent of Kansas farmers' cash receipts this is an important item for Kansas, the nation's number one wheat state.

Corn production, at 141.6 million bushels in 1987, was 22 percent below year ago levels. This was due to a 12 percent reduction in harvested acres, down to 1.18 million acres, and an average yield of 120 bushels, 16 bushels less than 1986. Prices for the calendar year were below 1986 for the first eight months, but averaged slightly higher in the remaining months. The value of production of the 1987 corn crop, at $262 million, was about ten percent below the 1986 value. In 1987, Kansas continued to be the 11th ranking corn producing state.

Grain sorghum production in Kansas totaled about 274 million bushels, 12 percent below 1986 due to a two bushel lower yield and harvested acreage 10 percent less than last year. Like corn, grain sorghum prices ran below previous year levels through August, but then surpassed 1986 levels. The value of production exceeded $413

million, unchanged from the previous year. This was the fourth year in a row in which Kansas was the nation's number one sorghum grain producing state.

Soybean production in Kansas reached a record 67.5 million bushels in 1987. This was 16 percent above the previous year due to an all-time record acreage for harvest at 2.1 million acres, 21 percent over 1986, and a yield of 32 bushels per acre. Soybean prices ran below year ago levels from January through April, but exceeded 1986 per bushel prices from that point. The value of production of the crop was estimated at $358 million, some 33 percent above the previous year. This was the first year in Kansas history that the total value of the Kansas soybean crop has substantially exceeded the total value of its corn crop. Kansas ranks ninth among states in soybean production.

Preliminary totals of Kansas' major crops point to a 14 percent increase in the value of production. Government payments for program crops also add significantly to the farmers' total returns.

The cattle inventory at the beginning of 1987 totaled 5.92 million head, two percent above the previous year, but the fourth lowest in the '70s and '80s. The Kansas cattle inventory fell one percent during 1987 and ended the year at 5.86 million head. The 4.7 million head of cattle marketings during 1987 were one percent below the record marketings of 1977, but two percent above 1986 marketings. Cattle prices during the year averaged 14 percent above the previous year with cash receipts from the sale of cattle reaching $3.4 billion, an increase of some 16 percent above the 1986 total. The slaughter of cattle in Kansas, at about 6.3 million head, was down 3.5 percent from the previous year, somewhat less than the national decline of 4.4 percent in total cattle slaughter.

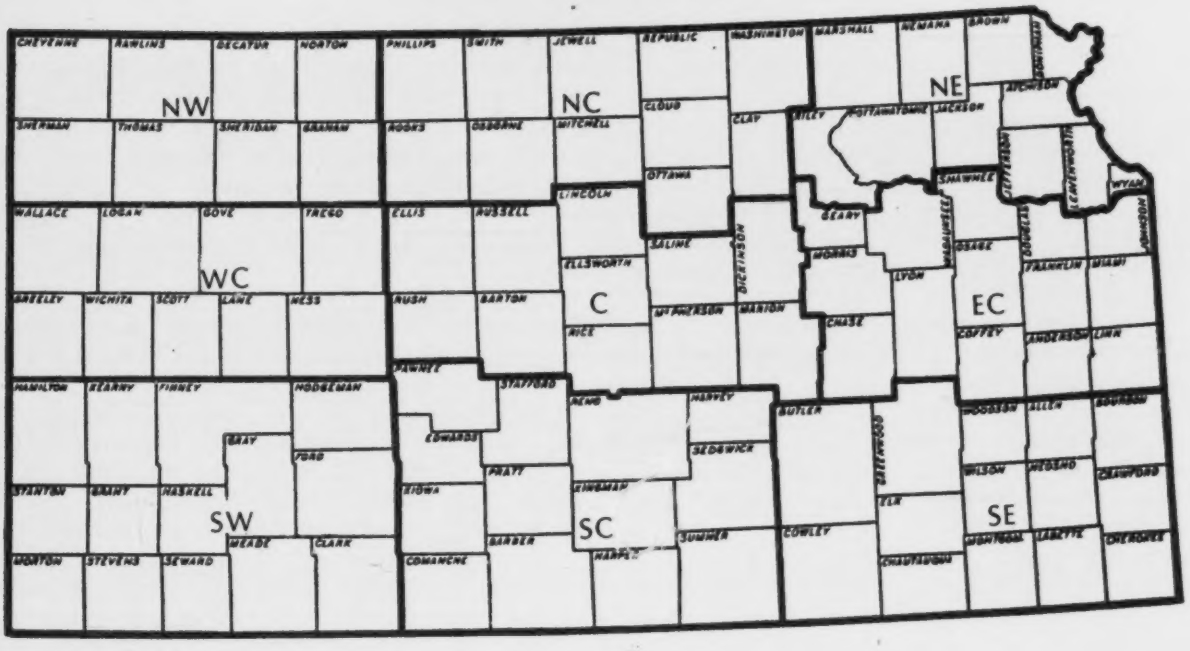
Kansas quarterly hog inventories averaged just below year ago levels, but the December 1987 inventory, at 1.45 million head, showed a two percent increase. Marketings, at close to 2.3 million head, were seven percent less than year ago levels, but prices averaged five percent more with the result that cash receipts from the sale of hogs were about three percent below 1986 levels. Kansas hog slaughter, on the other hand, was up 34 percent from the previous year with some 1.9 million head of hogs slaughtered in 1987.

The Kansas sheep inventories on January 1, 1988 totaled 277,000 head, up 17 percent from the previous year and the highest in 14 years. The slaughter facilities now in the state provide potential for increasing sheep inventories and marketings. The slaughter of sheep in Kansas during 1987 totaled 405,000 head, about 20 percent higher than the previous year.

Although Kansas was the number one state in red meat production in July and August 1987, significant increases in hog production in Iowa as well as a number of other midwestern states put Iowa back in the number one spot in red meat production during 1987. Kansas remained in the second spot with close to 4.7 billion pounds of red meat produced.

Farm finance surveys conducted early in 1987 showed considerable improvement in Kansas farm income during 1986 which most analysts believe will also be evident in 1987. Two factors playing an important role in the improved farm income picture in 1986 were government payments at a record $871 million for Kansas farmers, and farm production expenses which were the lowest in a number of years. The 1987 figures, when available, should show some increase in cash receipts, a generally high level of government payments, and only a modest increase in farm production expenses.

CROP REPORTING DISTRICTS



Kansas is divided into nine crop reporting districts for convenience in compiling and presenting statistical information on crops and livestock. These nine districts are outlined on the above map. The districts are designated as follows: northwest (NW), west central (WC), southwest (SW), north central (NC), central (C), south central (SC), northeast (NE), east central (EC), and southeast (SE). In tables showing statistical information by counties in this bulletin, counties within each district are grouped together in alphabetical order. Totals and averages are shown for each district.

1/ Beginning with 1975, a farm is defined as any place with annual sales of agriculture products of $1,000 or more. Between 1959 and 1975 a farm was defined as a place of 10 or more acres that had annual sales of agricultural products of $50 or more, or a place of less than 10 acres that had annual sales of $250 or more. Prior to 1959 a farm was defined as a place three acres or more in size with a value of farm products amounting to $150 or more. Places of less than three acres with sales of $250 or more were also considered farms.

NOTE: CCC loans are no longer included under farm debt; therefore, total farm debt and ratios to debt are not comparable to those published in previous releases of this data. Source: Economics Research Service, USDA.

1/ Data are for farms with sales of $1,000 or more annually.
2/ Preliminary.
3/ Excludes value of operator dwellings.
4/ Excludes horses, mules, and broilers.
5/ Includes only farm share value for trucks and autos.
6/ All non-CCC crops held on farms plus the value above loan rate for crops held under CCC.
7/ Excludes debt on operator dwellings, but includes CCC storage and drying facility loans.
8/ Excludes debt for non-farm purposes.

1/ Beginning with 1975, a farm is defined as any place with annual sales of agricultural products of $1,000 or more. Between 1959 and 1975 a farm was defined as a place of 10 or more acres that had annual sales of agricultural products of $50 or more or a place of less than 10 acres that had annual sales of $250 or more. Prior to 1959 a farm was defined as a place three acres or more in size with a value of farm products amountingto $150 or more. Places of less than three acres with sales of $250 or more were also considered farms.

2/ Land in farms estimates not available on annual basis until 1950.

Weights and Measures and Conversion Factors

Bushel weights:
- Wheat & soybeans = 60 lbs.
- Corn, sorghum & rye = 56 lbs.
- Barley (grain) = 48 lbs.: malt = 34 lbs.
- Oats = 32 lbs.

Bushels to metric tons:
- Wheat & soybeans = bushels X .02721555*
- Barley = bushels X .021772
- Corn, sorghum, rye = bushels X .025400
- Oats = bushels X .014515

1 Metric ton equals:
- 2204.622 lbs.
- 22.046 hundredweight
- 10 quintals

1,000 kilograms equals:
- 36.7437 bushels wheat or soybeans
- 39.3679 bushels corn, sorghum, or rye
- 45.9296 bushels barley
- 68.8944 bushels oats

Area:
- 1 Acre = .404694 hectares
- 1 Hectare = 2.4710 acres

Yields:
- Wheat = bushels per acre X 0.6725 = quintals per hectare
- Rye, corn = bushels per acre X 0.6277 = quintals per hectare
- Barley = bushels per acre X 0.5380 = quintals per hectare
- Oats = bushels per acre X 0.3587 = quintals per hectare

* The 1987 Kansas wheat crop of 366.3 million bushels is equivalent to 9,969,056 metric tons.
